(54) EASY LID OF CONTAINER

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a simple and convenient lid which is formed by utilizing a slightly thick paper and a thin aluminum foil like an aluminum foil to be used as daily necessities for easily covering a top of a paper cup, which facilitates carrying of the cup without overflow of the contents during swing, shuts out dust, dirt, and germ, and is helpful to retain warmth and coldness.

SOLUTION: Two notches are formed at a part of a lid paper B having a dimension similar to an outer diameter of a top edge of a paper cup so as to provide a claw section C. To the bottom of the lid paper B in that state, a trapezoidal material A of aluminum foil which is sufficiently larger than the lid paper is stuck in a shape of concentric circle excepting the claw section C. When it is to be used, the claw section C is raised and erected so as to form an easy-to-hold tab.
